Particulate Collectors

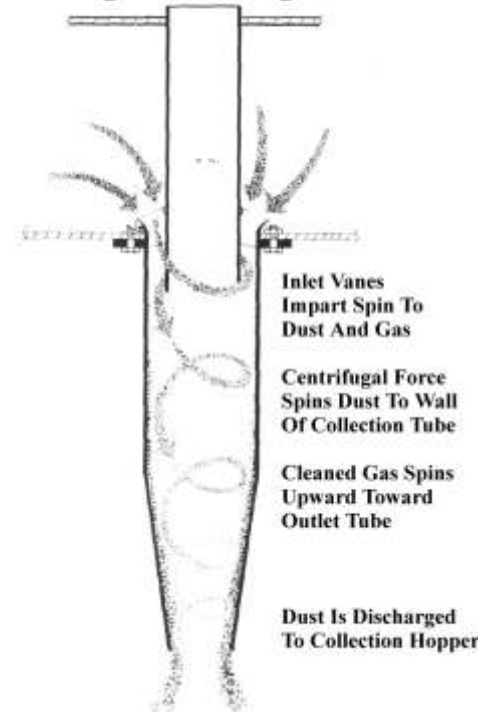

The Safe and Low Cost way to Turn Your Wood Waste Into Profits

Industrial Wood Products' particulate collectors are built for heavy duty service. The shell, hoppers, and frame are all heavy gauge steel designed for the long term. Inlet and outlet tubes are made from centrifugally cast, hard iron with wall thickness up to ½" thick. If replacement is ever necessary, inlet and outlet tubes are bolted to tube sheets for easy removal and replacement. Inlet vanes are independently removable for easy maintenance also. These IWP features, keep downtime cost to a minimal. IWP particulate collectors come in many different tube patterns.

Principle Of Operation
